                                                                                  LUCENE-4
                        LUCENE-4_C: Tests to validate solution
      LUCENE-4_M: Notice the day between this comment and
      the previous comment solution! There is a time frame of over
      5 months!
                                  LUCENE-4_C: Very old bug
                                     LUCENE-8_C: Ambiguity
                               LUCENE-8_C: Code Ambiguity
                                    LUCENE-8_C: Error output
                                                                                  LUCENE-8
                               LUCENE-8_C: Good Code Style
               LUCENE-8_C: Inflexibility from imported system
                M*- 1 Year old bugs seems to be born of
                Decision Seeker, when there is no motivation to
                                                                                          M*
                seek a final decision.
LUCENE-5_M: This is a different model of solution. The
                                                                                                                                                                             LUCENE-5_C: Release version
initial user did not accuse a solution or seem eager to solve it,
he/she just show the steps. Later, he (Gerhard) sought the
solution and in lack of replies he fixed on his own. It starts to
seem that the core development once in a while comes around
                                                                                                                                                                             LUCENE-5_C: Lack of confidence in usage
to gather a final decision and then do something. When
'desire for a final decision' occurs apparently so far it can
                                                                                                                                              LUCENE-5
either go as 'wont fix' and as his own fix solution. So far it
seems to depend on the inactivity of whoever initiated the
                                                                                                                                                                             LUCENE-5_C: Reproducibility of the error
                                                                                                                                                                             LUCENE-5_C: Error output
             LUCENE-10_C: Issue assigner proactviness
                                                                                                                                                                             LUCENE-9_C: Incomplete

                            LUCENE-7_C: Documentation error
               LUCENE-7_C: Documentation conformance error
                     LUCENE-7_C: Patch attached to wrong bug
                                                                                  LUCENE-7
      LUCENE-7_M: It depends on self awareness to notice
      something is being doing wrong or from someone else on the
      community. Here a patch is applied is applied with a different
      description of the bug and to solve a documentation bug(!).
      However the original author noticed he was doing it wrong.
                                       LUCENE-3_C: Bugzilla
                           LUCENE-3_C: Addition of methods
                    LUCENE-3_C: Inconsistent bug referencing
      LUCENE-3 M: Apparently this refers to LUCENE-2. Curiously
      enough, Lucene-3 came after Lucene-2, instead Lucene-2 is considered
      the duplicate of 3. The messages are the same, which suggest this
      duplication is of the type copy and paste. Since the issues from bugzilla
      differ, most likely the order of creation on Bugzilla is not enforced
      when moving to Jira (at least on the issue codes). No evidence has been
                                                                                 LUCENE-3
      found at this point.
             LUCENE-3_C: Spelling Correction while fixing bug
         LUCENE-3_M: This is one evidence that sub-tasking is
         logged while performing other activities. I believe I could
         consider this a refactor while fixing a bug later on if I find
```

other kinds of evidence.
